

hand-e-pix

from Handheld PCs

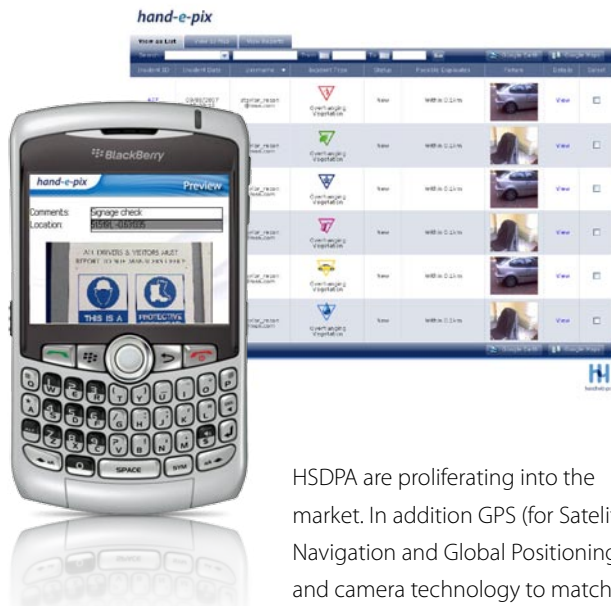

Product overview

hand-e-pix from Handheld PCs Ltd uses proven technology on a range of devices to collect a powerful combination of photographic evidence; free text and additional data; time stamp and location.

Today's Smartphones and PDA's are capable of capturing more information than ever before. Devices with a combination of powerful processors and sophisticated radio receivers for exchanging high volumes of data easily such as EDGE, 3G &

hand-e-pix from Handheld PCs takes advantage of all the technology in today's smartphones to enable your mobile workers to capture images, (time and date stamped) along with additional data and a GPS location. This information is then updated in real time to a secure website via the cellular network which is then presented in a database form or in a GIS system of your choice such as Google Maps!

If a picture speaks a thousand words, **hand-e-pix** lets you create factual volumes with the click of a button! Using a BlackBerry or Windows Mobile device, you can transfer high quality imagery and added data and have no doubt as to the accuracy of the information being gathered. This is then digitally transferred and stored in an archive, available to reproduce within written or electronic communication with clients, partners or across agencies. **hand-e-pix** is designed to be used by anyone, with or without photographic experience, looking to work in a mobile environment. Street wardens, environmental officers, health and safety regulators, quality control departments – anyone who may benefit from keeping an irrefutable record of what they have seen and, more importantly, when and where they have witnessed it. Ideal for any organisation looking to improve business process and gain efficiencies. By calling on web services provided by Google Maps you can get directions to a reported incident and graphically visualise problem areas.

HSDPA are proliferating into the market. In addition GPS (for Satellite Navigation and Global Positioning) and camera technology to match the best digital camera's available, significantly extend the boundaries of possibilities when sharing information from mobile workers with the corporate organisation in real time.

hand-e-pix

from Handheld PCs

hand-e-pix can help realise the potential of your existing BlackBerry user base. **hand-e-pix** can be installed over the air to users out in the field, to help them immediately start taking advantage of the **hand-e-pix** functionality. For Enterprise users, an Application Control Policy can optionally be created to push the application out to some or all devices. For Internet Service users **hand-e-pix** can be downloaded direct to your device. Windows Mobile users will also benefit from over the air deployment, making any rollout simple and easy to manage.

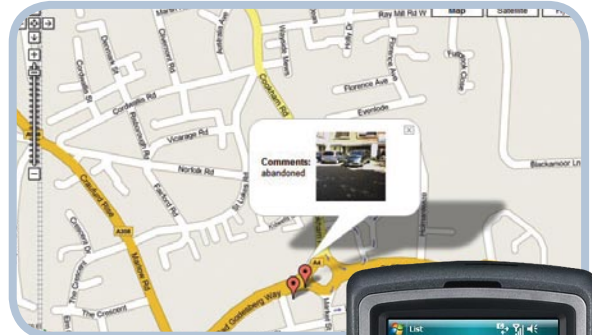

The technology compresses and encrypts the data and uses the fastest wireless connection available at the time (device dependent) to send the data quickly back to your office, saving remote personnel travelling time and improving response times. For those remote locations where cellular coverage is unavailable, captured information can be stored locally until a data connection become available. **hand-e-pix** is robustly crafted around a global data transfer standard, allowing you to maximise the potential of the very latest mobile devices. Whether a local authority looking to improve community care and standards, or a private organisation conforming to the latest legislation, **hand-e-pix** can deliver real efficiencies and increase staff productivity.

hand-e-pix can help realise the potential of your existing BlackBerry user base. If you are already synchronising your email and PIM with a Blackberry server, **hand-e-pix** can be installed over the air to users out in the field

Ask your Handheld PCs account manager or contact us to ask about running a limited trial in your environment.

Supported platforms:

Windows Mobile 5.0
Windows Mobile 6 Professional
BlackBerry v4.2

hand-e-pix is designed to be used by anyone, with or without photographic experience, looking to work in a mobile environment.
